

Process-Based Protocol

Protocol organized by process sections.

Preparation

Initial setup and reagent prep.

1. Buffer Preparation

Prepare 500 mL of PBS buffer.

Allow 30 minutes for this step.

2. Cell Seeding

Seed cells at target density.

Seeding Density: 1e+06.

Allow 15 minutes for this step.

Execution

Run the main experiment.

1. Incubation

Incubate at 37 degrees for 24 hours.

Allow 1440 minutes for this step.
